

Mac Geek Gab 244 "Open Recent Items Hotkey" Geek Challenge Solution

In MGG 244 Mark asked if there was a way to define a HotKey to open Recent items. I managed to accomplish this using a combination of an Application called [Spark](#) and an Applescript.

I wrote this Applescript that would click on recent items

```
activate application "Finder"  
tell application "System Events"  
    tell process "Finder"  
        click at {15, 2}  
        click at {63, 155}  
    end tell  
end tell
```

Then using Spark I assigned this Applescript to a HotKey, now when i click Option F6 recent items is opened.

Hope this works for Mark
Thanks Finbar
